

FISCHER RESIN SYSTEMS

Fischer Injection Mortar 380ml

Fischer Injection system FIS VS contains a styrene free high quality hybrid resin mortar. It anchors safely and without expansion pressure in almost all building materials. The two components are safely mixed together inside the mixer nozzle during application. With a wide range of applications this product is suitable for fixing machines, gratings, gates, handrails, brackets, cable trays, etc. as well as the more obvious fixing of threaded studs into masonry and concrete.

Fischer Injection Mortar 150ml

This 150ml kit provides a small quantity of the same adaptable multi use resin mortar as the larger 380ml kit, whilst avoiding the need to purchase the 380 gun. Often chosen where only a couple of fixings are to be set, this kit is supplied with a plunger which allows the resin/mortar to be mixed and extruded using the ubiquitous mastic / sealant gun.

Fischer Resin Anchor Capsules & Studs

The fixing unit of this system consists of a glass resin capsule, threaded rod/stud, washer & nut, together with an hexagonal installation drive to allow final mixing / stud setting using a slow speed electric drill. Ideal for fixing most construction materials to concrete and masonry, the threaded studs are available in both BZP and Stainless Steel and M8 through to M30 diameter.
